## Patent Claims

- 1. A method for heat dissipation in mobile radio devices having heat-emitting, electrical 5 which components (2), in the heat-emitting components (2) are brought into heat-dissipating contact with a metal foil (5), wherein the metal foil (5) is corrugated and/or is structured in the form of a honeycomb,
- 10 characterized in that the metal foil (5) is brought into contact with a heat sink (4).
- A mobile radio device having heat-emitting electrical components (2), in which the components (2) are each in heat-dissipating contact with a metal foil (5), wherein the metal foil (5) is corrugated and/or is structured in the form of a honeycomb,
- characterized
  in that the metal foil (5) is in heat-dissipating
  contact with a heat sink (4).
- 3. The use of a metal foil (5) which is corrugated and/or is structured in the form of a honeycomb for heat dissipation from heat-emitting electrical components (2) in mobile radio devices, wherein the electrical components (2) are brought into heat-dissipating contact with the metal foil (5),
- ocharacterized in that the metal foil (5) is in heat-dissipating contact with a heat sink (4).
